Position: Site Engineer Green Coast
Department: Technical
Location: Palasa

Summary: The Site Engineer implements the Site Manager's directives and inspects the works in accordance with the design, technical specifications and KTZ, applicable legislation, safety & health conditions.

Main Responsibilities:

- Compliance Control of projects and details (Identification of discrepancies between architectural - constructive projects - KUZ - KUB, underground infrastructure engineering), including reviewing details and providing technical solutions for implementation, as well as constructive and architectural detailing of various elements;
- Compiling and following the construction schedule according to the project and the organization plan;
- Compilation and control of all technical and legal documentation on site, such as reports, measurement sheet, bill of quantity, control and steaking out plan, etc;
- Quality control and safety issues at site, ensuring that all rules are being implemented according to the QA/QC and HSE management regulations as well as the rules in power;
- Controlling subcontracting firms and taking measures to meet legal requirements for technical insurance on site;
- Monitoring the quality of first-hand materials coming to the construction site from different suppliers;
- Approval of materials implemented on site;
- Ensuring the implementation of works in accordance with the company's quality management policy;
- Taking over the implementation works, conducting regular inspections;
- Preparation of snag lists, lacking or unfinished works as part of the testing process;

- Strict implementation of enterprise contracts, technical rules and dress code;
- Preparation of quality control files for specific imported materials that cannot be analyzed in our laboratories;
- Monitoring quality in various technological processes during the implementation of works;
- Organizing and coordinating with subordinate staff (technician, foreman, plumber, electrician, surveyor) for works on site;
- Leading the works, planning the work fronts for different processes and contractors, coordinating the work program between the contractors, where their work intersects in certain phases;
- Identifying the needs for materials and their good management, needs of machinery and labor force;
- Preparation of daily and weekly reports on issues and related progress;
- Periodic cost control, in accordance with the bill of quantity;
- Identification, planning and calculation of volumes for items of the bill of quantity and items of new or unforeseen works in the bill of quantity;

Education: University Degree in Civil Engineer.

Requirements:

- Minimum 5 years of work experience in Civil Works (construction & finishing works);
- Ability to read, analyze and explain projects, business correspondence, contracts, procedures and technical manuals;
- Ability to manage various specific projects and contracts involved in construction projects;
- Ability to present issues as efficiently as possible, excellent verbal and written communication, preparation of reports, etc;
- Ability to suggest solutions and to take decisions;
- Principles and practices in the use of software (CAD, EXCEL, MS-PROJECT (or PRIMAVERA), etc);

Application Procedure: To apply for this position, please submit a CV and a Motivation Letter before July 13, 2022 on the [link](#)
